A key safe is a strong mechanical metal box in which you can securely store the key to your door. It is installed into brick or concrete on the outside of your property and your keys are accessed by a combination code. When buying a key safe you should make sure it has the 'Secured by Design' approval and logo.

A key safe is usually bought without a code being set.

- When setting your code, avoid using dates of birth such as 1935 as it is an easy number to guess, use random numbers instead.
- It should be the responsibility of the key safe owner or their carer to set and remember the code and to pass it on to any necessary organisations such as home help, and doctors etc.
- Care organisations and health professionals abide by strict data protection regulations and will have a secure system of recording key safe codes so that they cannot be misused.
- We suggest you keep a note of your code in a safe place just in case you forget it and to remember to update all authorised persons or organisations every time you change your code.
- Without the correct code no-one will be able to open your key safe to access your keys.
- We strongly recommend that if someone no longer has a need for the code that it be changed to a new one immediately.
- If you move house please leave the key safe un-coded for the next resident or, if you own it, take it with you.
